Overview and Objectives

The **Environmental Health Resources Self Learning Modules** have been created specifically to provide local health agencies an overview of these environmental health topics:

Land Reuse

Epidemiology

Risk Communication

Risk Assessment

Toxicology

Each module consists of a printable overview followed by more detailed self-study resources.

These materials are not meant to replace professional training courses and serve only to help local health agencies interact with their communities and address concerns about topics in environmental health, particularly as related to land reuse. Local health agency staff and other environmental health professionals have provided input on these modules to ensure these help increase knowledge and awareness.

You can refer to these modules whenever you feel the need for a refresher on one or more of the different topics. **Simply click on the training you want to explore, below:**

Land Reuse

Epidemiology

Risk Communication

Risk Assessment

Toxicology

If you need assistance in understanding concepts in these environmental health modules, please contact your State Health Department, your [ATSDR Regional Office](#), or send an email to atsdr.landreuse@cdc.gov.
